## EXECUTIVE SUMMARY

This Executive Summary presents the results of the Phase I Environmental Site Assessment (ESA) performed by Geosyntec Consultants, Inc. (Geosyntec) for the approximately 15.5-acre property located at north of East Norman Road and west of Lena Road, San Bernardino, California, 92410 (the “Site”). This Phase I ESA was prepared in accordance with the scope of work, terms and conditions described in Geosyntec’s proposal dated 28 April 2021. This Phase I ESA was performed in accordance with ASTM Standard E1527-13. The objective of performing this Phase I ESA was to identify, to the extent feasible, “Recognized Environmental Conditions” (RECs) at the Site as the “REC” term is defined by ASTM E1527-13. Geosyntec understands that Hillwood Enterprises, L.P. (Hillwood) intends to develop and lease this Site for use as a warehouse.

The Site includes approximately 15.5-acres that consists of a mix of vacant, residential, and commercial properties. Commercial businesses on-Site include a former auto-body repair facility, vehicle/trailer storage and maintenance facilities, and automotive dismantling. Six permanent residences are currently located on-Site along East Norman Road. The Site appears to have historically been used for agricultural purposes until it was redeveloped into rural residential properties in the 1940s.

The Phase I ESA performed by Geosyntec has revealed the following conditions as defined by ASTM:

### *De Minimis Conditions*

- **On-Site Automotive Operations:** From approximately 2006 to present, the Site has been used for storage of decommissioned vehicles, automotive repair including auto-body, used parts storage, and various other commercial activities. The Site is unpaved and moderate to heavy staining associated with vehicle storage and repair was observed at multiple locations. Drums and other materials stored without secondary containment were observed at the Site and are indications of poor hazardous materials management practices and poor “housekeeping” procedures. Geosyntec conducted a Limited Phase II ESA which included soil and soil vapor sampling at locations associated with the historical automotive operations at the Site. The soil analytical data has not been reported as of the date of this report. The preliminary soil vapor analytical results identified localized impacts of VOCs at low concentrations below current regulatory screening levels. Therefore, based on the preliminary data, the historical on-Site automotive operations do not appear to represent a REC, but rather a de minimis condition.
- **Historical Agricultural Land Use:** Historical Site documents and aerial photographs indicated that the majority of the Site was used for agricultural purposes from sometime prior to 1930 until the 1940s. Based on the timeframe of the agricultural activities, it is possible that pesticides or herbicides were used on-Site; however, no evidence of

pesticide/herbicide usage was found as part of this Phase I ESA. Therefore, this finding is not a REC but rather a *de minimis* condition.

Following investigation, it appears that “data gaps” as defined by ASTM exist for the Site. However, in Geosyntec’s opinion, none are considered to be significant with respect to identification of additional RECs for the Site.

## 1. INTRODUCTION

Geosyntec Consultants, Inc. (Geosyntec) was retained on behalf of Hillwood Enterprises, L.P. (Hillwood or Client) to perform a Phase I Environmental Site Assessment (ESA) for the property located at north of East Norman Road and west of Lena Road, San Bernardino, California, 92410 (the “Site”). Geosyntec understands that Hillwood intends to develop the Site with warehouses. The Site location, a recent layout, and Site vicinity are provided on the appended Figures.

### 1.1 Purpose

This Phase I ESA was conducted in general accordance with the scope and limitations of the guidance contained within the ASTM International (ASTM) Practice E1527-13. Deviations or exceptions to the guidance contained in the ASTM E1527-13 standard of practice are described in Section 1.4. The intent of Geosyntec’s effort is to provide the User with a Phase I ESA that includes a search for the existence of potential or known surface or subsurface environmental impacts at the Site. For the purposes of this Phase I ESA report, Hillwood represents the “User,” defined as “the party seeking to use Practice E1527-13 to complete an environmental site assessment of the property...”

The Phase I ESA was conducted to identify, to the extent feasible, “Recognized Environmental Conditions<sup>1</sup>” (RECs) at the Site, as the “REC” term is defined by ASTM E1527-13. This REC definition eliminates from consideration a number of conditions that could fall under the general definition of “environmental” issues and focuses the Phase I ESA on known or potential releases of hazardous substances and petroleum products that Geosyntec believes could have impacted the soil, groundwater, and/or soil vapor at the Site. Such conditions include radon, wetlands, etc.; unless in the case where these out of scope items are specifically included in the Client’s scope of work (see Section 8).

### 1.2 Scope of Services

Geosyntec was authorized by Bob Close of Hillwood to conduct the scope of work specified in Geosyntec’s 28 April 2021 proposal and authorized via Professional Services Agreement on 10 May 2021. The Phase I ESA scope of work included: (i) review of pertinent information/documents provided by Hillwood; (ii) review of environmental databases for the Site and in the vicinity of the Site pursuant to the ASTM E1527-13 Standard; (iii) review of historical land usage via historical aerial photographs, fire insurance maps, city directories, and U.S. Geological Survey (USGS) topographic maps, and past reports on the Site, as available; (iv) a

---

<sup>1</sup> As defined by ASTM E1527-13, a Recognized Environmental Condition is: “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”

Site visit to perform a visual reconnaissance of the major Site features; and (v) a report. In addition, as non-scope items, Geosyntec also reviewed the building/structure age (if present), and if available, historical information regarding lead-based paint (LBP), asbestos-containing materials (ACM), and water and mold. These non-scope items are discussed in Section 8.

This Phase I ESA was conducted under the supervision of Veryl Wittig who is an “Environmental Professional” (as defined under the ASTM Practice E1527-13). Under Mr. Wittig’s direction and oversight, the Site visit was conducted on 18 May 2021 by Derrik Kapalla of Geosyntec and the report was drafted by Mr. Kapalla. The professional qualifications of the individuals above are presented in Appendix F.

### **1.3 Significant Assumptions**

Except as may be noted in Geosyntec’s proposal, no significant assumptions were taken into account by Geosyntec as part of this project.

### **1.4 Limitations, Deviations, and Exceptions**

This Phase I ESA was performed according to the agreed upon scope of work with Hillwood consistent with the ASTM Practice E1527-13, except as follows:

- Due to time limitations on preparing the Phase I ESA, review of agency files pertaining to the Site and surrounding properties was limited to online resources only.
- Access to the interior of residences at the Site was not granted, and therefore residential properties were observed from the exterior only.
- Geosyntec attempted but was unable to conduct an updated interview of the former owners/operators of the Site pursuant to ASTM E1527-13 guidance.

This Phase I ESA contains a property description and history, an environmental database review, a summary of visual observations made during the Site reconnaissance, and descriptions of information obtained during interview(s) of person(s) knowledgeable with the Site. The findings and conclusions presented in this Phase I ESA are the result of professional interpretation of the information collected at the time of this study. The Phase I ESA does not necessarily include an exhaustive search of all available records nor does it include detailed assessment of all Phase I ESA findings. Therefore, Geosyntec cannot “certify” or guarantee that any property is free of environmental impairment; no warranties regarding the environmental quality of the property are expressed or implied.

### **1.5 Special Terms and Conditions**

Except as may be noted in Geosyntec’s proposal, no special contractual terms or conditions were taken into account as part of this project.

## 1.6 User Reliance

This Phase I ESA report has been prepared solely for the benefit of Hillwood. Geosyntec has issued the Updated Phase I ESA report to its client and grants Hillwood the right to rely on the report contents. Except as specifically set forth in Geosyntec's proposal to Hillwood to perform this work, no third party except Hillwood shall have the right to rely on Geosyntec's opinions rendered in connection with the services without Hillwood's approval and Geosyntec's written consent, which may be conditioned on the third party's agreement to be bound to acceptable conditions and limitations.

## 2. SITE DESCRIPTION

This section provides a description of the key characteristics of the Site. This description is derived from information provided by the Client and information gathered during the reconnaissance unless referenced otherwise.

### 2.1 Site Location and General Characteristics

The Site is an approximately 15.5-acre property consisting of 32 individual parcels (San Bernardino County Parcel ID: 0280-161-03; 0280-161-21; 0280-161-31; 0280-161-30; 0280-161-05, 06, 07, 08, 09, 10, 11, 12, 13 & 14; 0280-161-18; 0280-161-17; 0280-161-15 and 16; 0280-171-01, 02, 03, 04, 05, 06, 07, 08, 09, 10 & 11 and; 0280-151-15, 16 & 17) located north of East Norman Road and west of Lena Road in San Bernardino, California. A legal description of the Site was not provided to Geosyntec. Current tax parcel/map information is provided in Appendix C.

### 2.2 Current and Former Uses of the Site

Currently, the Site consists of a mix of vacant, residential, and commercial properties. Commercial businesses on-Site include vehicle storage and maintenance facilities, and automotive repair including auto-body work. Six residences are currently located on Site along East Norman Road. During the Site reconnaissance it was indicated that the Site residences are connected to septic systems. The Site appears to have historically been used for agricultural purposes until it was redeveloped into rural residential properties in the 1940s. The eastern portion of the Site was redeveloped into a stormwater retention basin by 2009.

### 2.3 Current Use of Adjoining and Nearby Notable Properties

The vicinity is currently a mix of commercial, industrial, and residential. Current uses are summarized below:

- North – Vacant land, an elementary school, and a warehouse;

- East – Kenco Warehouse and residential;
- South – Vacant warehouse; and
- West – Residential and a church.

## 2.4 Physical Setting

### 2.4.1 Topography and Geology

The Site is depicted on the USGS 7.5 minute San Bernardino South, California quadrangle map. Geosyntec obtained a physical setting report for the area of the Site from Environmental Data Resources, Inc. (EDR). According to the EDR report (Appendix E), the Site has an elevation of approximately 1,035 feet above mean sea level with a decreasing topographic gradient to the West-southwest. The EDR report identified Site soils largely as Tujunga gravelly loamy sand. According to geologic information provided in the EDR report, the region is characterized by southwest sloping alluvial plains underlain by Quaternary alluvium. This alluvium consists of thick, discontinuous, unconsolidated sediments resulting from alluvial fan and fluvial deposition.

### 2.4.2 Hydrology

The Site is located in an area of minimal flood hazard as indicated on the Federal Emergency Management Agency Flood Insurance Rate Map for the Site.

The Site is located within the Upper Santa Ana Valley Bunker Hill groundwater subbasin. In general, groundwater flow direction may vary depending on area groundwater pumping, surface water bodies, land use and development, localized topography, and other macro and micro features. Prior investigations at nearby properties did not investigate depth to groundwater. The nearest groundwater well was identified on the California Department of Water Resources (CA DWR) Water Data Library approximately 1/8-mile north of the Site. The most recent groundwater measurement from 2010 reported a depth to water of 89.09 feet below ground surface (ft bgs). Groundwater flow in the immediate vicinity of the Site is generally expected to follow surface topography and flow to the southwest. Prior investigations at nearby properties did not investigate depth to groundwater.

The EDR Physical Setting Report (Appendix E) identified one former USGS groundwater well constructed in 1950 at the adjoining property to the east of the Site. One groundwater measurement exists for this well which reported a depth to water of 37.5 ft bgs on 14 September 1950. This well was not identified during the Site reconnaissance as part of this ESA.

## 3. USER-PROVIDED INFORMATION

This section describes the information provided to Geosyntec by Hillwood (the User of this Phase I ESA). Per ASTM E1527-13, a User Questionnaire was provided to the User to inquire about

specialized information related to the Site. To date, a completed questionnaire has not been provided to Geosyntec; the User indicated that they have no specialized knowledge of environmental conditions on the Site beyond that described in Section 3.3 below.

### **3.1 Title Records**

Geosyntec was not provided with and did not review title records for the Site. A property title search was not included in the scope of Geosyntec's services.

### **3.2 Environmental Liens or Activity and Use Limitations**

The User did not provide Geosyntec with records for liens or activity and use limitations for the Site.

### **3.3 Specialized Knowledge**

The User did not provide specialized knowledge pertinent to RECs at the Site.

### **3.4 Commonly Known or Reasonably Ascertainable Information**

The User did not indicate it had commonly known or reasonably ascertainable information (as defined in AAI) regarding the Site.

### **3.5 Valuation Reduction for Environmental Issues**

The User has not informed Geosyntec regarding whether or not the valuation of the Site has been reduced or otherwise impacted by environmental issues (as defined in AAI) at the Site.

### **3.6 Owner, Property Manager, and Occupant Information**

For this Phase I ESA, the User did not supply Geosyntec with a contact for the Site. Rather, Geosyntec coordinated access through Hillwood.

### **3.7 Reason for Performing This Phase I ESA**

Geosyntec understands that the Client engaged Geosyntec to perform this Phase I ESA for the Site to identify "Recognized Environmental Conditions" (as defined in ASTM E1527-13) and potential environmental liabilities associated with the Site in preparation for leasing and developing the Site.

### **3.8 Additional Information**

The User did not provide Geosyntec with additional information relevant to the Site.

## 4. RECORDS REVIEW

Geosyntec's records review consisted of the following, to the extent available and reasonably ascertainable within the timeframe of the report preparation: i) review of identified federal, state, and local environmental databases; ii) review of historical aerial photographs; iii) review of historical topographic maps; iv) review of city directories; v) review of select public and Client/owner-provided records related to environmental matters; and vi) review of available property tax information.

### 4.1 Environmental Database Search

#### 4.1.1 Overview

Geosyntec contracted with EDR to provide the records reviewed as described below. The environmental database search was performed by EDR in an attempt to ascertain whether the Site or neighboring properties were suspected of having environmental conditions that could have impacted the surface or subsurface at the Site. Specific records and search distances (from the approximate Site boundaries) for the environmental databases were reported by EDR to be consistent with ASTM Practice E1527-13 and are discussed in the EDR Database Report (presented in Appendix E). Database descriptions are also included in the EDR report. Relevant results for the Site and vicinity are discussed in the following sections.

#### 4.1.2 Results – Site

The Site is listed in the following databases:

The Site address of 464 E Norman Road was identified by EDR in multiple databases including the Hazardous Waste Tracking System (HWTS), FINDS, and San Bern Co. Permit. No violations or evidence of a release were identified at the Site in the EDR database listings.

#### 4.1.3 Results – Vicinity Properties

EDR identified two properties in the immediate vicinity of the Site in databases potentially indicative of a release (e.g., leaking underground storage tanks, cleanup sites) or in a database indicative of solid waste disposal (SWF/LF) or land use concerns (e.g., historical military sites). Of these, the following were considered to have some potential to have impacted the soil, groundwater, and/or soil vapor at the Site:

- Kenco Logistic Services, LLC adjoining the Site to the east and topographically cross-gradient, is listed in multiple databases including California Environmental Reporting System Hazardous Waste Generator (CERS HAZ WASTE), CERS Tanks, and Hazardous Waste Tracking System (HAZNET). This listing appears to have an aboveground storage tank (AST) for “petroleum.” Waste generated at the Site includes unspecified aqueous solution, and off-specification, aged or surplus organics. No violations were reported for

this listing. Based on the information available this listing is not anticipated to have adversely impacted the Site.

- Norton AFB is located approximately ¾-mile northeast of the Site and is listed in multiple databases including: NPL, RCRA-TSDF, RCRA-SQG, CERS HAZ WASTE, SEMS, PADS, and ROD. Norton AFB was historically developed as a municipal airport in 1940. Shortly thereafter, the Site and vicinity were transitioned to a military airbase by 1941, and later commissioned as various military installations, mostly notably as Norton Air Force Base (AFB) from 1950 to 1994. The base was closed in 1994 following the Installation Restoration Program (IRP) and Base Realignment and Closures (BRAC). Historical operations at Norton AFB resulted in releases of hazardous materials and petroleum products to soil at groundwater which triggered the listing on the NPL. Based on the distance from the Site and depth to groundwater greater than 100-feet, this listing is not anticipated to have adversely impacted the Site.

#### 4.1.4 Unplottable Sites

ERIS did not identify any “unplottable sites” which could not be mapped by EDR.

## 4.2 Historical Use Information

Geosyntec contracted EDR to provide standard historical records, including aerial photographs, topographic maps, fire insurance maps, and city directories. The following documents were provided to Geosyntec for review and are included in Appendix E:

- Historical aerial photographs –1930, 1938, 1949, 1953, 1959, 1966, 1968, 1975, 1985, 1989, 1994, 2002, 2006, 2009, 2012, 2016 and 2020;
- Historical topographic maps – 1896, 1899, 1901, 1938, 1942, 1943, 1954, 1967, 1973, 1975, 1980, and 2012;
- Fire insurance maps – Requested, but no coverage was identified by EDR; and
- City directories – 1955, 1965, 1970, 1975, 1981, 1994, 1996, 1999, 2003, 2004, 2008, 2009, 2014, and 2017.

A summary of the findings from the review of the historical sources is provided in Table 1 and is summarized below:

- Site – Based on aerial photograph review, the Site was primarily agricultural land from 1930 until 1938. By 1949 the Site was subdivided into multiple parcels with multiple residential structures in the southern portion of the Site. The Site appeared similar though 1985. By 1989, numerous vehicles were located in the southwestern portion of the Site which appears to correspond with city directory listing of “Leahs Towing Service” from 1994. By 2006, residential structures in the southeastern portion of the Site were no longer

present. The majority of the Site appeared to be vacant land. By 2009 the northern and eastern portions of the Site was primarily vacant land and appeared to have been redeveloped into stormwater retention basins.

- Surrounding vicinity – Based on topographic map and aerial photograph review, from 1930 through 1938 the Site vicinity consisted of agricultural and vacant land with scattered residential structures. By 1949 the Site vicinity appeared to consist of residential properties with small agricultural operations. Residential development continued to increase through 2002. By 2009 a large commercial building was located adjoining the Site to the northeast. Increased commercial development in the vicinity of the Site continued through 2016.

In summary, the review of aerial photographs, topographic maps, and city directories revealed usages (agriculture, commercial/industrial) that could be indicative of hazardous materials/chemical storage, management/usage, or disposal at the Site or in the immediate vicinity that could pose a threat to the soil, groundwater, and/or soil vapor quality at the Site. However, in this review, Geosyntec noted no definitive features showing chemical management, chemical spills or evidence of waste disposal on or into the ground at the Site.

### 4.3 Property Tax Records

Geosyntec searched online San Bernardino County real estate data to obtain records associated with the Site. No additional information was found regarding current and previous owners. The retrieved tax map parcel information is provided as Appendix C to this report.

### 4.4 Local, County, State, and Federal Files

Geosyntec searched local, county, state, and federal agencies' online databases to search for records regarding the Site. Relevant information is summarized below.

#### 4.4.1 Local and County Records

Geosyntec searched the San Bernardino County Environmental Health Services website and did not find any online information.

#### 4.4.2 State Records

Geosyntec searched the online State Water Resources Control Board GeoTracker<sup>2</sup> and Department of Toxic Substances Control (DTSC) EnviroStor<sup>3</sup> databases for information relevant to the

---

<sup>2</sup> GeoTracker is the Water Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. GeoTracker contains records for sites that require cleanup, such as Leaking Underground Storage Tank Sites, Department of Defense Sites, and Cleanup Program Sites.

<sup>3</sup> EnviroStor is the Department of Toxic Substances Control's data management system for tracking our cleanup,

environmental condition of the Site and vicinity properties. No pertinent listings were identified for the Site or vicinity.

Geosyntec searched the California Geologic Energy Management Division (CalGEM), formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR) database which did not indicate the presence of current or historical oil, gas, or geothermal wells within one mile of the Site.

#### 4.4.3 Federal Records

Review of the United States Environmental Protection Agency (USEPA) records associated with sites listed in the ERIS Database Report did not reveal additional information or potential for RECs in connection with the Subject Property or surrounding properties.

Review of the USEPA Enforcement and Compliance History Online (ECHO)<sup>4</sup> database indicated several surrounding properties were identified in the ECHO database; however, no violations were reported that may have impacted the Site. This database is used to track compliance, releases, and other information for facilities handling hazardous materials.

Review of the USEPA National Priorities List (NPL)<sup>5</sup> database revealed Former Norton AFB located approximately 3/4-mile northeast is listed on the NPL. This listing is discussed previously in section 3.2.2. This listing was also identified in the Air Force Civil Engineer Center website and Base Realignment and Closures Sites website.

### 4.5 Client- or Owner-Provided Environmental Assessment Documents

No documentation was provided by the Client or owner during this assessment.

## 5. SITE RECONNAISSANCE

### 5.1 Methodology and Limiting Conditions

A reconnaissance of the Site was conducted by Geosyntec representative Derrick Kapalla on 18 May 2021. Photographs taken during the reconnaissance are included in Appendix A. Adjoining properties were peripherally observed from the perimeter of the Site.

As part of the Site reconnaissance, Geosyntec looked for evidence of the presence of hazardous substances used, stored, or discarded, and inspected the Site for areas of disturbed or discolored soil, suspect equipment and/or building materials which may contain hazardous substances, areas of distressed vegetation, wastewater discharge areas, storage tanks/septic systems, waste

management/disposal areas, lagoons, pits, sumps, surface water management areas, and stained surfaces.

## 5.2 Utility Service & Materials Management Provider Information

At the time of the Site visit, electricity was provided by Southern California Edison and water provided by San Bernardino Metropolitan Water District to the Site. Information pertaining to the disposal of used oil, hazardous waste, or used batteries was not made available.

## 5.3 Interior and Exterior Observations

Observations made by Geosyntec during the Site reconnaissance are documented as follows:

Geosyntec Site Reconnaissance Observations		
ASTM Section	Feature or Condition	Description
<i>Interior and Exterior Observations</i>		
9.4.2.3 & 9.4.2.8	Hazardous Substances or Petroleum Products	Various containers of motor oil and fuel cans were identified at the Site associated with the automotive body repair business. Additional substances identified included automotive paints, lubricants, and solvents.
9.4.2.4	Underground Storage Tanks (USTs)	No evidence of USTs was identified.
9.4.2.4	Aboveground Storage Tanks (ASTs)	No evidence of ASTs was identified.
9.4.2.5	Odors	Paint odors were identified at the Site.
9.4.2.6	Pools of Liquids	No pools of liquid indicative of a chemical release were identified.
9.4.2.7	Drums and Containers > 5 Gallons	Two unlabeled 275-gallon intermediate bulk containers were observed at the Site. The contents are unknown.
9.4.2.9	Unidentified Substances/Containers	No unidentified containers were identified.
9.4.2.10	Polychlorinated Biphenyl (PCB) Items	Overhead powerlines were observed along East Norman Road. Power line poles across E. Norman Road were equipped with pole mounted transformers which appeared to be in good condition.
<i>Interior Observations</i>		
9.4.3.1	Heating and Cooling Systems	Heating and cooling systems appeared to be window mounted units associated with residences.

9.4.3.3	Drains and Sumps	No Floor drains or sumps were observed.
<i>Exterior Observations</i>		
9.4.4.1	Pits, Ponds, or Lagoons	No pits, ponds, or lagoons were observed.
9.4.4.2	Stained Soil or Pavement	Soil staining was observed in the automotive repair facility portion of the Site.
9.4.4.3	Stressed Vegetation	No obviously stressed vegetation indicative of a chemical discharge or application was observed at the Site.

Geosyntec Site Reconnaissance Observations		
ASTM Section	Feature or Condition	Description
9.4.4.4	Solid Waste	Decommissioned vehicles, construction debris and windblown debris was observed throughout the Site.
9.4.4.5	Wastewater or Stormwater Discharge	No wastewater discharge was observed on the Site, with the exception of domestic waste.  Stormwater appeared to flow to the southeastern portion of the Site where a storm water retention basin was located. Inlet risers were observed in the southeastern portion of the Site.
9.4.4.6	Wells	No wells (water production or monitoring) were observed at the Site.
9.4.4.7	Septic Systems	One septic system was identified at 464 East Norman Road. It is assumed the remaining residential properties at the Site are on septic systems.

## 5.4 Adjoining Property Reconnaissance

Geosyntec did not visit the adjoining properties but did observe them from vantage points on the Site and on public roads near the Site. Our limited inspection of adjoining and vicinity properties did not reveal conditions suggesting obvious environmental impairments with the ability to impact the Site at the adjoining properties during the time of our Site reconnaissance.

## 6. INTERVIEWS

### 6.1 Interview with Current Owner/Occupant

Geosyntec was not provided with contact information for any of the current property owners; Geosyntec did not conduct an interview with current owner representatives. However, during the Site reconnaissance an occupant at 464 East Norman Road who requested to remain anonymous was interviewed. The occupant identified the location of the septic system and autobody repair areas at the Site. No further information was obtained.

### 6.2 Interview with Previous Owner/Occupant

Geosyntec was not provided with contact information for any of the former property owners; Geosyntec did not conduct an interview with former owner representatives.

### 6.3 Interview with Local Agencies

In accordance with the Client agreed-to scope of work associated with this Phase I ESA, Geosyntec did not interview local agency personnel.

## 7. FINDINGS, OPINIONS, AND DATA GAPS

In the following sections, Geosyntec presents our findings and opinions, data gaps, and conclusions (Sections 7.1 through 7.3) regarding any identified RECs, Controlled RECs (CRECs), Historical RECs (HRECs), and/or de minimis conditions associated with the Site.

### 7.1 Findings and Opinions

Geosyntec has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Site described herein. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. The Phase I ESA performed by Geosyntec has revealed the following conditions as defined by ASTM:

#### *RECs*

As defined by ASTM E1527-13, a REC is: “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”

No RECs were identified during the course of this assessment.

#### *CRECs*

A CREC is “a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

No CRECs were identified during the course of this assessment.

#### *HRECs*

An HREC is “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

No HRECS were identified during the course of this assessment.

### *De Minimis Conditions*

A de minimis condition is a condition that “generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies”. De minimis conditions are not recognized environmental conditions.

Based on the information Geosyntec obtained, Geosyntec has concluded that the following findings do not meet the definition of a REC, CREC or HREC and are de minimis conditions:

- **On-Site Automotive Operations:** From approximately 2006 to present, the Site has been used for storage of decommissioned vehicles, automotive repair including auto-body, used parts storage, and various other commercial activities. The Site is unpaved and moderate to heavy staining associated with vehicle storage and repair was observed at multiple locations. Drums and other materials stored without secondary containment were observed at the Site and are indications of poor hazardous materials management practices and poor “housekeeping” procedures. Geosyntec conducted a Limited Phase II ESA which included soil and soil vapor sampling at locations associated with the historical automotive operations at the Site. The soil analytical data has not been reported as of the date of this report. The preliminary soil vapor analytical results identified localized impacts of VOCs at low concentrations below current regulatory screening levels. Therefore, based on the preliminary data, the historical on-Site automotive operations do not appear to represent a REC, but rather a de minimis condition.
- **Historical Agricultural Land Use:** Historical Site documents and aerial photographs indicated that the majority of the Site was used for agricultural purposes from sometime prior to 1930 until the 1940s. Based on the timeframe of the agricultural activities, it is possible that pesticides or herbicides were used on-Site; however, no evidence of pesticide/herbicide usage was found as part of this Phase I ESA. Therefore, this finding is not a REC but rather a *de minimis* condition.

## 7.2 Data Gaps

In accordance with ASTM E1527-13, this section documents data gaps in the information obtained and reviewed as part of this Phase I ESA and discusses the associated significance. A data gap is defined as being “a lack of or inability to obtain information required by this practice [ASTM E1527-13] despite good faith efforts by the environmental professional to gather such information”. Data gaps identified included the following:

- Due to time and scope limitations in preparing the Phase I ESA, no in-person file review was conducted with local, state, or federal agencies.
- Access to the interior of residences at the Site was not granted, and therefore residential properties were observed from the exterior only.

Collectively, in Geosyntec's opinion, none are considered to be significant with respect to identification of additional RECs for the Site. These data gaps have been incorporated into our findings.

### 7.3 Conclusions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of north of East Norman Road and west of Lena Road, San Bernardino, California, 92410 the property. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

This assessment has revealed no evidence of RECs in connection with the property except the following:

De minimis condition(s) have been identified, as described under Section 7.1, above.

## 8. NON-SCOPE CONSIDERATIONS

### 8.1 Asbestos-Containing Materials (ACM)

**Constructed After 1981:** The buildings on the Site were constructed in prior to 1949. Buildings constructed in or before 1981 are presumed to contain ACM unless inspection or sampling are completed to refute this presumption. Please note that this report should not be construed as constituting an asbestos assessment for the purposes of demolition or reconstruction or for complying with applicable regulatory standards.

### 8.2 Lead-Based Paint (LBP)

**Constructed After 1978:** The buildings on the Site were constructed prior to 1949. Buildings constructed in or before 1978 are presumed to contained LBP unless inspection or sampling are completed to refute this presumption. Please note that this report should not be construed as constituting a lead-based paint survey for the purposes of demolition or reconstruction or for complying with applicable regulatory standards.

### 8.3 Water and Mold

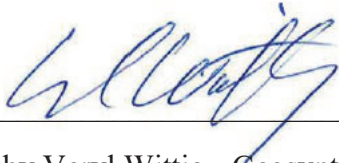

**Building(s):** The Site buildings were constructed in the 1940s. Geosyntec's reconnaissance did not identify readily observable indications of water damage or potential mold. Note that our assessment did not include a thorough review of all building spaces and areas of water damage or mold may be present in areas not readily observable.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

Summary Details:

Conditions at proposal October 15, 1984): Norton Air Force Base covers approximately 2,036 acres 58 miles east of Los Angeles near the City of San Bernardino, San Bernardino County, California. It is in a low-lying alluvial plain surrounded on the north and east by the San Bernardino Mountain Range. The base began operations in 1942 and has served as a major overhaul center for jet engines and the general repair of aircraft. Since 1962, the facility has served as a Military Airlift Command Base. In addition, Norton formerly had the responsibility for providing maintenance and logistics for liquid-fuel intercontinental ballistic missiles. Past hazardous waste management practices may have contributed to existing contamination problems throughout the base. The practices include burial of drums and other unspecified materials; disposal of waste oils, solvents, and paint residues into landfills, unlined pits, ponds, and drying beds; storage in leaking underground tanks; and spills of AVGAS, oils, solvents, PCBs, and acidic plating solutions. Industrial solvents have been used extensively on the base. Unknown quantities of spent solvents were disposed of in several base landfills. A well on the base has been contaminated with trichloroethylene (TCE). The well water is currently being used in a blended system and is sampled quarterly to ensure that TCE is below the California State action level. The water is used by approximately 11,000 people who live and/or work on the base. Norton Air Force Base is participating in the Installation Restoration Program (IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. The Air Force has completed Phase I records search). Phase II remedial investigation) is underway. Status July 22, 1987): In November 1986, the California Regional Water Quality Control Board issued a Cleanup and Abatement Order requiring Norton to clean up one on-base area, the Industrial Waste Water Treatment Plant Sludge Drying Beds. Phase II-Stage 2 of the IRP was completed in December 1986. It focused on characterization of the contamination at 18 on-base areas. More than 22 areas have been identified to date. Additional areas will be studied in Stage 3, scheduled to begin in the fall of 1987. Within the boundaries of this Federal facility, there are areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act (RCRA). However, no such areas were included in scoring this specific site. Therefore, this Federal facility site is being placed on the Federal section

<p>NPL Status:          Property History:</p>	<p>Not on the NPL          The Army Air Corps acquired over 2500 acres for use as an Air Corps Supply Depot. The Air Force established Norton Air Force Base on the property in 1950. The 152.12 acres disposed between 1946 and 1970 were acquired in the 1940s by license, easement, leasehold, fee, and permit. These parcels were used for water and sewer pipeline rights-of-way, navigation line-up lights, portable airway flight aid lights, living quarters and storage space. There were three properties disposed between 1971 and 1986. In March 1945, 69.69 acres located south of the Base and in the path of one of the runways, was encumbered with an avigation easement to eliminate height obstructions. The owner continued to use the property for agricultural purposes. A 4.52 acre easement was acquired in 1945 for flood control purposes and was quitclaimed in 1981. A total of 19.41 acres were acquired in fee in 1950 and 1951 in order to eliminate height obstructions along the approach to one of the runways. There is no evidence to suggest that the properties were used for any other purpose. The properties were disposed in 1985 and 1986 since the runway requiring elimination of height obstructions was closed. Norton AFB was closed 31 March 1994 as a result of BRAC I. The Base is a Superfund Site and is currently undergoing remediation as part of the closure and disposal. The 89.1 acres described in the previous paragraph are not effected by the groundwater contamination plume originating from the center of the Base.</p>

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. ## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

## **EDR HIGH RISK HISTORICAL RECORDS**

### ***EDR Exclusive Records***

#### **EDR MGP: EDR Proprietary Manufactured Gas Plants**

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### **EDR Hist Auto: EDR Exclusive Historical Auto Stations**

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: Hanford

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6
2	11 inches	59 inches	fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.8 Min: 5.6

**LOCAL / REGIONAL WATER AGENCY RECORDS**

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# APPENDIX F

## Environmental Professional Resumes

## **Environmental Professional Qualifications**

### ***Veryl Wittig, PG, CHG***

Mr. Wittig is a Senior Principal Hydrogeologist with more than 29 years of diverse experience in planning, conducting, and managing multi-disciplinary due diligence projects involving Phase I Environmental Site Assessments (ESAs), contaminant investigations, vapor intrusion studies, human health risk assessments, engineering feasibility studies, environmental liability evaluations, mitigation of environmentally impaired properties, regulatory coordination, and litigation support for a variety of private and public sector clients. Mr. Wittig has conducted and/or managed more than 250 Phase I ESAs throughout the USA and northern Mexico between 1992 and the present in accordance with ASTM standards to evaluate the presence of Recognized Environmental Conditions (RECs) associated with the subject properties. The Phase I ESAs have involved a variety of complexities and property usages ranging from rural native land to highly-impacted industrial properties with more than a century of historical activity. Mr. Wittig earned a Bachelor's degree in Geological Sciences (Hydrogeology Emphasis) from San Diego State University in 1991.

### ***Derrik Kapalla, G.I.T. (CA)***

Mr. Kapalla, under the guidance of a registered Professional Geologist, has conducted Phase I ESAs throughout the United States in accordance with ASTM standards to evaluate the presence of "recognized environmental conditions" associated with various property types. Based on the results of Phase I ESAs, numerous Phase II site characterizations have been performed to assess potential impacts resulting from historical activities.
