ABSTRACT

A Phase I Environmental Subject Site Assessment was conducted for the contiguous separate properties with APNs: 028-130-117, 028-131-108, 028-131-107, 028-131-106, 028-131-111, 028-131-112, 028-130-120, 028-130-121, 028-131-119 and 028-131-118 (together, the “site”) in San Bernardino, California. The purpose of this effort was to conduct “all appropriate inquiries”¹ to identify adverse environmental issues associated with previous ownership and uses of the facility/property prior to a commercial real estate transaction (sale, lease, etc.) or development.

Research for this report included a visit to the subject site and adjacent properties/vicinity, review of available subject site history including building permit records, aerial photographs, and city directories, discussion of the subject site’s physical characteristics, and review of regulatory agency records for the potential for “recognized environmental conditions”² in connection with the subject site.

Evaluation of the key component of “business environmental risk”³ was made for the subject site by MBCE (Marc Boogay Consulting Engineer, “the environmental professional”⁴, per the specification, ASTM 1527-13).

This assessment identified environmental concerns from onsite illegal dumping and small burn piles. Regional groundwater well testing near the subject site may indicate an adverse regional condition as limits groundwater usage and is considered an environmental concern. Onsite and surrounding historical and current agricultural usages revealed an environmental concern as residual chemicals could remain in soil, such as DDT, etc. These threats were considered environmental concerns not rising to the level of a recognized environmental condition. It is recommended that the illegal dumping items be removed from the site properly and signs or fences in place to prevent further dumping.

¹ “All appropriate inquiry” is intended to permit a *user* to satisfy one of the requirements to qualify for the *innocent landowner, contiguous property owner, or bona fide prospective purchaser* defenses.

² **RECs** are defined by the ASTM specification as, “ the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions.” **Controlled RECs** are past releases that have been addressed to the satisfaction of the applicable regulatory authority (for example, a “no further action” designation has been assigned). Controlled RECs do not imply unrestricted use of the property. **Historical RECs** meet unrestricted use criteria as determined by the applicable regulatory authority.

³ Defined by ASTM E 1527-13 as “a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

⁴ Defined by ASTM E 1527-13 as a person meeting the education, training, and experience requirements as set forth in 40 CFR §312.10(b).

1.0 AUTHORIZATION, OBJECTIVE AND APPROACH

This study was conducted in accordance with a contract between *Marc Boogay Consulting Engineer* (MBCE) and *Hamann Companies* (the "Client"), dated February 22, 2023. It concerns the contiguous separate properties with APNs: 028-130-117, 028-131-108, 028-131-107, 028-131-106, 028-131-111, 028-131-112, 028-130-120, 028-130-121, 028-131-119 and 028-131-118 (together, the "site") in San Bernardino, California. This study was performed in accordance with the scope of American Society of Testing & Materials (ASTM) E 1527-13, Standard Practice for Environmental Subject site Assessments: Phase I Environmental Subject site Assessment Process.

The purpose of this Phase I Environmental Subject site Assessment was to identify recognized environmental conditions in connection with the subject site and for "due diligence" (as defined in the ASTM specification) in judging the likelihood of hazardous substances or petroleum products that may be present in soil, soil vapor ⁵, or groundwater at the subject site, as could potentially result in an enforced environmental clean-up or environmental liability.

2.0 SCOPE OF WORK

The scope of services for this work is described by the following elements, transcribed from the contract:

- A subject site inspection and vicinity visit, with assessment of the possible presence of soil and groundwater contamination and threats from current or past subject site and vicinity usage.
- A review of readily available (published) regulatory agency records, including lists of CERCLIS and Superfund/SARA subject locations, hazardous waste storage/generation locations, vicinity violations and releases, and leaking underground tanks.
- A review of readily available local government agency records including enforcing UST/AST regulatory agencies, enforcing hazardous materials storage agencies, county/city departments of environmental health, and local departments of Building, Planning, Public Works, and Fire.
- A review of readily available soils, topographic, and geologic/hydrogeologic data for the subject site and vicinity.
- A review of readily available historical information for the subject site, including aerial photographs, interviews, and records regarding on-subject site hazardous materials/wastes.
- Review of documents as provided by the Client, including appraisals, geotechnical and soils reports, chain-of-title information, etc.

⁵ Per the ASTM standard, the presence within a building of hazardous substances such as vapors that have migrated into a building from a "release into the environment" (i.e., from a release outside of the building) can result in CERCLA liability.

3.0 SUBJECT SITE RECONNAISSANCE

The inspection of the subject site and the adjacent properties/ vicinity was performed on February 27, 2023 by Marc Boogay, of *Marc Boogay Consulting Engineer* (“environmental professional” per the ASTM specification). The subject site comprised 7.4- acres of various vacant properties.

3.1 Subject site Description

Material in this section was based on a visit to the subject site/vicinity conducted by MBCE. The subject site was only visually inspected; no inspection was completed under floors, behind walls, or above ceilings, etc., or in any areas concealed by obstacles of any kind, e.g., within piled materials or parked vehicles. Information concerning presence of hazardous materials may also be noted in Section 3.2.

The subject site consisted of ten parcels of land on the north and south side of Hardt Street West of Tippecanoe Avenue.

Inside the subject site building(s):

No buildings were onsite.

Outside the subject site building(s):

The subject site was primarily taken up by vacant land. The subject site consisted of two areas, north of Hardt Street were four parcels identified as: 028-130-117, 028-131-108, 028-131-108 and 028-131-106 and South of Hardt Street were six parcels identified as: 028-131-111, 028-131-112, 028-130-120, 028-130-121, 028-131-119 and 028-131-118. Along the southern and western boundaries small piles of trash and rubble were found. In the southeast corner of the northern subject site area was an underground utility vault. Along the eastern boundary of the southern lot were small areas of burnt trash piles.

Ancillary structures:

No ancillary structures were observed.

3.2 Selected Environmental Assessment Issues

Hazardous Materials Storage/Use – This section describes the types, quantities, container types, and storage conditions of hazardous materials observed at the subject site.

Storage tanks – None was observed.

Drains and sumps – None was observed.

Pits, ponds, lagoons, and/or pools of liquids - None was observed.

Interior or exterior stains/corrosion – None was observed.

Distressed vegetation – None was observed.

Odors – None was observed.

Solid wastes – Scattered small piles of dumped miscellaneous items of inert trash and rubble.

Wells – None was observed.

Engineering Controls – No physical modifications, such as capping, slurry walls, or point-of-use water treatment, were seen at the subject site.

Polychlorinated biphenyls – Polychlorinated biphenyls (PCBs) have historically been found in electrical equipment such as transformers and lighting ballasts. Installations of equipment involving PCBs are much less likely in recent decades. Where present, warning placards are often in place. No transformers on or adjacent to the subject site were noted to have evidence of leakage or placards warning of PCBs. (NOTE: The ASTM standard does not require disclosure of fluorescent lighting ballasts).

3.3 Adjacent Property Observations

The immediate vicinity was characterized by vacant land, industrial and commercial usage.

Properties adjacent to the subject site were as follows:

- To the north was a large paved drainage channel, across this was a railway and across this was a large commercial building for chemicals and shipping products.
- To the south was the roadway East Brier Drive and across this was a hospital and commercial usage.
- To the east was the company *Lucky Farm* a fruit and vegetable wholesaler and a paved parking lot.
- To the west was what appeared to be pump houses possibly for the nearby drainage channel or wells with vent pipes suggesting underground fuel storage tanks.

4.0 HISTORY AND USAGE

A records review was performed to obtain and analyze “reasonably ascertainable”⁶ records to help identify recognized environmental conditions in connection with the subject site. Per the ASTM standard, a reasonable attempt was made to identify uses back to 1940 or to the first developed usage. These sections may include the results of additional research completed for adjoining properties, if/as deemed necessary by the environmental professional. Interviews were completed with local government officials as deemed relevant by the environmental professional. Historical resources provided by EDR, where appropriate, are included in Appendix VI.

4.1 City/Local Department Records

Building/Planning/Public Works Departments – Building department records were requested by the subject site APNs, the following is a summary of records found:

- A permit to develop a 17,580-square foot commercial building was submitted by *Hamann Construction*, dated 10/18/2021 for APN: 028-130-117, 028-131-106, 028-131-111, 028-131-118 and 028-130-120.

⁶ Per the ASTM standard, “reasonably ascertainable” information is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable. Information that is “practically reviewable” means that the information is provided by the source in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary data analysis.

- A permit to change zoning from CR-3 to IL for future industrial development for APN 028-130-120 under business name *Hamann Construction*, dated 8/02/2019.

Department of Fire Protection and Safety –Records were not available within time constraints of this report.

4.2 County Department of Environmental Health

Records were requested by the subject site’s parcel numbers; records were not identified.

4.3 Land Use Limitations

Zoning/Land Use – Information obtained from the City of San Bernardino Zoning Parcel Map indicated the subject site is part of the following classifications:

- 028-130-227, 028-131-107, 028-131-112: Industrial
- 028-131-108, 028-131-108, 028-131-111, 028-130-120, 028-130-121, 028-130-121, 028-131-119, 028-131-118: Commercial

Deed Restrictions –Activity and use limitations (AUL) aim to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water at the subject site through legal (institutional controls) and physical restrictions (engineering controls). AULs may indicate that hazardous substances or petroleum products have been released at the subject site and that, as a result, unrestricted use of the subject site is not appropriate. California law requires that the Department of Toxic Substances Control (DTSC) notify the planning and building departments of all local governments of any recorded land use restriction (“deed restriction” or restrictive covenants). Included should be any institutional controls that apply to the subject site. On its website ⁱⁱ, DTSC maintains a list of land use restrictions, including street addresses or the equivalent description of location. Locations were not identified within 500-feet of the subject site.

4.4 Sanborn Fire Insurance Maps

A search of available maps from a private fire insurance map company, *Sanborn Fire Insurance Maps*, was performed. These typically indicate historical usage. Search of these maps by *Environmental Data Resources* (EDR) indicated no coverage for the subject site.

4.5 Historical Photographs and Topographic Maps

Per the ASTM specification, historical aerial photographs (photographs taken from an aerial platform with “sufficient resolution to allow identification of development and activities of areas encompassing the property”) were reviewed. These and historical USGS Topographic Maps were made available by resources from *Environmental Data Resources Inc.* (EDR). Any gaps of greater than five years were due to insufficient data for the specific subject site. A recent aerial photograph noting position of the subject site is presented with all reviewed photographs as Appendix IV. The following table lists photographs and interpretations.

Historical Aerial Photograph Review Summary

Notations near the subject site were consistent with aerial photograph interpretations and other inputs. No significant land usage threat to the subject site was interpreted from these maps.	

4.6 Criss-Cross Street Directories

Cross-referenced (“criss-cross”) street directories showing tenancy/ownership of the subject site were researched by EDR; city directories were researched in approximately five-year intervals. The following table describes the type of directory, its publication year, and a summary of subject site tenancies found for the subject site address. Where appropriate, adjacent/nearby offsite usages are noted as may represent environmental risk for the subject site. Listings for adjoining properties were interpreted as consistent with observed and known usages. Directories for 2017, 2014, 2009, 2008, 2004, 2003, 2002, 1999, 1996, 1995, 1994, 1991, 1990, 1985, 1981, 1980, 1975, 1970, 1965, 1964, 1961, 1960, 1956, 1955, 1951, 1950, 1949, 1946, 1945, 1942, 1941, 1940, 1938, 1936, 1934, 1931, 1930, 1926, 1923 and 1922 were reviewed.

4.7 Questionnaires and Interviews

Questionnaires - A questionnaire was prepared using a form generated by *Marc Boogay Consulting Engineer* in accordance with the ASTM Practice E 1527-13 specification. One copy of the questionnaire was filled out by MBCE, based on observations made during the subject site/vicinity visit and research conducted as part of this assessment. MBCE also conveyed a questionnaire to the site owner/manager. Questionnaires are attached in Appendix V.

In the questionnaire completed by the subject site ownerⁱⁱⁱ, all questions were answered “no” or “unknown” with no additional comments.

Interviews – Per the ASTM standard, interviews are to be conducted with owners, operators, occupants and past occupants (at the discretion of the environmental professional), and/or key subject site managers. No interview was possible with key personnel involving the subject site.

4.8 Property Tax Files

These refer to files kept for property tax purposes by the local jurisdiction where the subject site is located and may include reports of past ownership, appraisals, maps, sketches, photos, or other information that is *reasonably ascertainable* as defined by the ASTM standard. These were limited to those provided by the Client for review; no historical ownership documents were provided.

4.9 Recorded Land Title Records

Records of historical fee ownership (e.g., leases, and land contracts) on or of the subject site may be of use in environmental subject site assessment. In San Diego County, recorded land title records are filed at the County Recorder (see Section 4.8, above). No title reports or chain-of-title records were supplied by the Client for review.

(The ASTM E 1527-13 standard does not require review of recorded land title records and judicial records for environmental liens or activity and use limitations.)

4.10 Other Historical Records

Other readily available historical records may be reviewed for a Phase I report, e.g., miscellaneous maps, newspaper archives, internet sites, community organizations, local libraries, historical societies, current owners or occupants of neighboring properties, and other sources. None were identified.

5.0 PHYSICAL SETTING

In the following sections, information regarding soils, geology, topography, and groundwater at the subject site is considered. Such information sometimes indicates direction/extent for contaminant migration in groundwater or soil, in the event of a spill or other release.

5.1 Soil

As indicated by soil survey information provided in the EDR report, the subject site appeared to be underlain by very fine sandy loam, with the name, *GRANGEVILLE*; the hydrology was said to be somewhat poorly drained with moderate infiltration rates.

5.2 Geology

EDR’s geologic resources indicated the subject site to be underlain by Era Cenozoic, with system Quaternary and series Quaternary with a code Q and a category of Stratified Sequence.

5.3 Topography

Subject site topography appeared generally level. Further research using EDR’s proprietary topographical software showed the subject site to be approximately 1046-feet above mean sea level, generally level with regional slight downward slope towards the general west-northwest.

5.4 Groundwater

Groundwater depth on or near the subject site was not provided in the EDR report; it was deemed likely to migrate in a west-southwest direction. Wells were identified within 1/8-mile of the subject site, various did not have information regarding groundwater. One well within 1/8-mile identified as FED USGS USGS40000140579 reported well depth to be 396- feet below surface with ground water reported at 102.6-feet below surface on 4/26/200 and 67-feet below surface on 4/27/2004. An additional well identified as CA WELLS 935 and 930 with depth not reported, and various results of testing groundwater for various chemicals including: perchlorate, dichloroethylene, total trihalomethanes, trichloroethane, bromoform, uranium, nitrates, additional hydrocarbons, .etc. This may indicate an adverse regional condition as limits groundwater usage and is considered an environmental concern.

6.0 REGULATORY AGENCY RECORDS REVIEW

Environmental Data Resources Inc. (EDR), an independent firm specializing in governmental database information, was assigned the search of databases for locations, which represent various environmental threats, within distances specified in the American Society for Testing & Materials standard, ASTM E 1527-13. The resulting report is presented in appendix VI, and includes descriptions of all researched sources and maps showing the locations of facilities identified in the database searches. Other information was researched through local sources and other in-house sources. Results of this additional research are presented in Section 6.2.

In general, listings within 1/8-mile of the subject site are considered of particular interest. Releases involving chlorinated hydrocarbons within 1/3-mile of the subject site should be especially considered for potential soil vapor intrusion risk to the subject site.

THE SUBJECT SITE

The subject site address was not found on any databases searched by EDR.

THE SUBJECT SITE VICINITY

Threats to the site were primarily discounted on the basis of distance. Those within 1/8-mile were deemed to represent the greatest potential risk for contaminant migration to the subject site.

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA. One location was identified within 1-mile of the subject site; this was not within 1/8-mile.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity. One location was identified within 1-mile of the subject site; this was not within 1/8-mile.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on locations which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Three locations were identified within 1/4-mile

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. There were two locations identified within 1/4-mile of the subject site, one was within 1/8-mile identified as:

Environmental MNGMT Technologies Inc. at 1456 S Gage Street was listed with the description "conditionally exempt small quantity" with the hazardous wastes ignitable waste and corrosive waste and the NAICS descriptions "solid waste collection, hazardous waste collection and other waste collection." This listing was additionally on the PADS database with a certification date of 12/11/2018.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or locations for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional facility information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites. One location was identified within 1-mile of the subject site; this was not within 1/8-mile.

Lists of state and tribal landfills and solid waste disposal facilities

CA SWF/LF: The Solid Waste Facilities/Landfill Facility records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data comes from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database. Two locations were identified withing 1/2-mile of the subject site; none were within 1/8-mile.

Lists of state and tribal leaking storage tanks

CA LUST: Leaking Underground Storage Tank (LUST) Facilities included in GeoTracker. EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station locations that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as “High Risk Historical Records”, or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past locations and operations that typically create environmental concerns, but may not show up in current government records searches. One location was identified within 1/8-mile of the subject site; identified as:

CA ST CHP at 847 E Brier Drive was listed for the years 2002-2008 under type “gasoline service stations.”

6.2 Additional Research

Findings from other reviewed resources are summarized as follows.

Oil Fields and Pipelines - Wastes generated during oil drilling and leakage from pipelines were also researched, as they may threaten environmental conditions for a subject site. California State's Division of Oil and Gas (DOG) provided a map^{iv} showing oil wells/fields and petroleum product pipelines in California. One well was found within 1-mile of the subject site, identified as 07190036 well type "temperature gradient" with well status "idle" under operator's name *City of San Bernardino Board of Water Commissioners*, drilled in 1982

Provided Documents – Documents provided by client included subject site aerial maps, construction plans and project descriptions.

7.0 FINDINGS, DISCUSSION

7.1 Subject site

Observed Conditions – The subject site comprised vacant property. The vacant areas were mostly covered in vegetation with some areas with dense vegetation and small berms along boundaries. In some areas there were dump piles, illegal dumping of domestic items including small burn piles. These findings were deemed to be environmental concerns not rising to the level of a recognized environmental condition.

History – The subject site has a long history of vacant raw land and agricultural usage. This represents an environmental concern as residual chemicals from agriculture usage could remain in the soil, such as DDT, etc. These findings were deemed to not rise to the level of a recognized environmental conditions.

Questionnaires/Interviews – No additional threats were inferred from any questionnaire or interview.

Regulatory Agency Records Review – The subject site was listed not listed on any databases searched by EDR.

7.2 Subject site Vicinity

Observed Conditions – The subject site vicinity was interpreted as vacant, commercial, and industrial usage. Adjacent commercial usage was identified as involving a chemical shipping company and industrial shipping stations. These findings were deemed environmental concerns not rising to the level of recognized environmental conditions.

History – The subject site vicinity has a history of vacant land, residential, commercial, industrial and agricultural usages. Threats from previous agricultural usages represent an environmental concern as residual chemicals could remain in the soils. Additional threats from nearby chemical facilities pose a threat from releases. This was not deemed to rise to the level of a recognized environmental conditions.

Special additional note regarding risks from soil vapor – Cases have arisen where migration of soil vapors (gasses evolving from volatile chemicals released to the soil) have affected occupied spaces. This is a growing concern in environmental subject site assessment.

Another ASTM specification, No. E2600-10 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, has been incorporated in Phase I reports per the E1527-13 specification; it suggests potentially significant risk from vapor for non-petroleum-hydrocarbon contamination within a 1/3-mile radius, and for petroleum-hydrocarbon contamination within a 1/10-mile radius. The following table identifies locations found within these search parameters.

SITE NAME	ADDRESS	DATABASES	DIST(mi)
S AND G ROOFING SUPPLY INC.	1444 TIPPECANOE AVE	LUST,CORTESE,HIST CORTESE,CERS	0.295
SUPPORT SERVICES BUILDING	1333 TIPPECANOE AVE	LUST,CORTESE,HIST CORTESE,CERS	0.299

Vapor intrusion and vapor encroachment – A default area of concern (AOC) for known contaminated locations or suspect contaminated locations is 1/3-mile radius from subject site for COCs (chemicals of concern) (volatile/semi-volatile hazardous substances) and a 1/10-mile radius for petroleum hydrocarbon COCs, measured from the subject site boundary to known or suspect contaminated property. Taking groundwater flow and subsurface characteristics into consideration, an adjusted area of concern (AAOC) was identified. For down-gradient COCs and for PHC (petroleum hydrocarbons) the AAOC was deemed a 100-foot distance for LNAPLs (light, non-aqueous-phase-liquids) and 30-feet for dissolved constituents. For cross-gradient COCs the AAOC used was 365-feet, 165-feet for LNAPLs, and 95-feet for dissolved COCs. For up gradient COCs the AAOC was deemed 528 feet. Threats were not found within these search parameters.

Physical Characteristics – The subject site’s topographic gradient suggested a likely flow direction for groundwater in the general west-southwest, implying somewhat greater risk from releases in the opposite, “up gradient” direction; significant up-gradient threats were not identified.

Regulatory Agency Records Review – As presented in Section 6.0, there were one-hundred-forty-eight potential environmental threats listed within search radii. Fifty-two were identified within 1/8-mile. These findings revealed underground tank usage, hazardous material usage, and hazardous waste generators. These threats were identified as environmental concerns not rising to the level of a recognized environmental condition.

7.3 Data Gaps

Data gaps comprise inability to obtain mandatory information required by the ASTM standard despite a good faith effort by the environmental professional to do so. Data gaps, if any, are summarized here. An interview with key personnel was not available and fire department records were not available for review.

8.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I Environmental Subject Site Assessment in conformance with the scope and limitations of ASTM Practice E: 1527-13 for the subject site identified as the APNs: 028-130-117, 028-131-108, 028-131-107, 028-131-106, 028-131-111, 028-131-112, 028-130-120, 028-130-121, 028-131-119 and 028-131-118 (together, the “site”) in San Bernardino,

California. Any exceptions to, or deletions from, this practice are described in the corresponding section of this report.

This assessment identified environmental concerns regarding onsite abandoned debris from illegal dumping including very small burn piles. Regional groundwater well testing near the subject site may indicate an adverse regional condition as limits groundwater usage and is considered an environmental concern. Onsite and surrounding historical agricultural usages reveal environmental concerns as residual chemicals could remain in soil, such as DDT. These threats were considered environmental concerns not rising to the level of a recognized environmental and no further action is deemed warranted. It is recommended that any illegally dumped materials be disposed of properly. Signs or fences could assist in hindering future onsite dumping.

9.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professionals as defined in 312.10 of 40 CFR 312, with specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

This report has been prepared with reasonable diligence, reflecting the standards of skill and care typically exercised in the field of environmental assessment. The accuracy or completeness of any report cannot be guaranteed, however, since government records, which provide the basis for much of the subject site research, may be incomplete, inaccurate, or out of date. Also, per the scope of this assessment, no inspection has been made of that which was not easily accessible within the time frame of this report. This assessment is not intended to be exhaustive and uncertainty has not been eliminated.

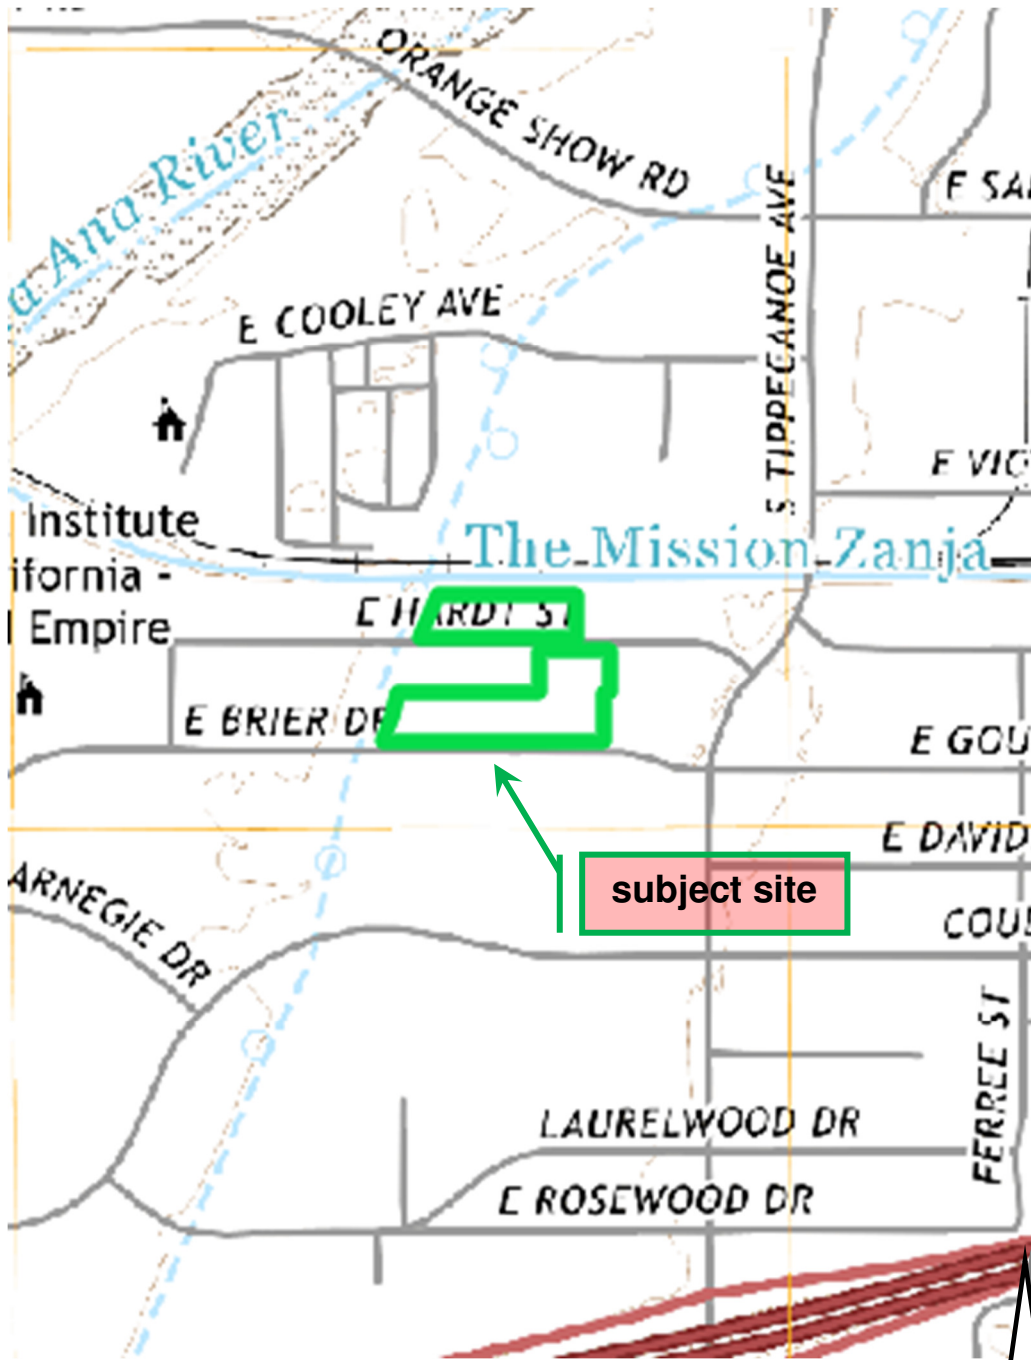

This work researched only the likelihood of a hazardous waste condition that could result in an enforced cleanup or abatement action. It did not include toxicological or industrial hygiene services and did not assess threats from contact with any hazardous wastes or substances. This investigation does not represent any level of survey for radon, lead-containing dust or paint, molds/allergens, or asbestos.

Due to the likelihood of change in the subject site and subject site vicinity, and the potential for future releases of hazardous materials in the vicinity, this report will become obsolete and, therefore, is intended for use only in the six months following the submittal date. This document is prepared solely for the use of the Client, and shall not be used or relied upon by other individuals, agencies, or organizations, except if and as specifically designated in writing by both Client and Consultant.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/24/2022 has revealed that there is 1 CA ENVIROSTOR site within approximately 1 mile of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 01/03/2022 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto

Summary Details:

Conditions at proposal October 15, 1984): Norton Air Force Base covers approximately 2,036 acres 58 miles east of Los Angeles near the City of San Bernardino, San Bernardino County, California. It is in a low-lying alluvial plain surrounded on the north and east by the San Bernardino Mountain Range. The base began operations in 1942 and has served as a major overhaul center for jet engines and the general repair of aircraft. Since 1962, the facility has served as a Military Airlift Command Base. In addition, Norton formerly had the responsibility for providing maintenance and logistics for liquid-fuel intercontinental ballistic missiles. Past hazardous waste management practices may have contributed to existing contamination problems throughout the base. The practices include burial of drums and other

unspecified materials; disposal of waste oils, solvents, and paint residues into landfills, unlined pits, ponds, and drying beds; storage in leaking underground tanks; and spills of AVGAS, oils, solvents, PCBs, and acidic plating solutions. Industrial solvents have been used extensively on the base. Unknown quantities of spent solvents were disposed of in several base landfills. A well on the base has been contaminated with trichloroethylene (TCE). The well water is currently being used in a blended system and is sampled quarterly to ensure that TCE is below the California State action level. The water is used by approximately 11,000 people who live and/or work on the base. Norton Air Force Base is participating in the Installation Restoration Program (IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. The Air Force has completed Phase I records search). Phase II remedial investigation) is underway. Status July 22, 1987): In November 1986, the California Regional Water Quality Control Board issued a Cleanup and Abatement Order requiring Norton to clean up one on-base area, the Industrial Waste Water Treatment Plant Sludge Drying Beds. Phase II-Stage 2 of the IRP was completed in December 1986. It focused on characterization of the contamination at 18 on-base areas. More than 22 areas have been identified to date. Additional areas will be studied in Stage 3, scheduled to begin in the fall of 1987. Within the boundaries of this Federal facility, there are areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act (RCRA). However, no such areas were included in scoring this specific site. Therefore, this Federal facility site is being placed on the Federal section of the NPL under the NPL/RCRA policy announced on September 8, 1983 (48 FR 40662).

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

OSHA ESTABLISHMENT

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Experience

Over thirty years of experience in environmental assessment and teaching in Southern California counties including research, site inspection, review of manufacturing processes and commercial site usage. Site assessment familiarity includes regulations and regulatory practice concerning soil/groundwater contamination and remediation/monitoring requirements; teaching experience includes mathematics, science, and aviation.

Experience has included designing, maintaining and regulatory requirements for sanitary landfills, landfill monitoring and closure reports, and soil-gas monitoring to assess risks for methane and volatile vapors as might intrude into structural spaces of buildings near a landfill.

Phase II site assessments have included soil, soil-gas, and groundwater sampling for assessment of many sites in Southern California, preparation of work plans to county Department of Environmental Health standards, estimations for risk assessment.

Experience with site-remediation includes comparisons of alternative strategies, project design, negotiation for approvals by regulatory agencies, and progress monitoring and follow-up studies; preparation of reports through case-closure status on several sites.
